DERBYSHIRE COUNTY COUNCIL

PENSIONS AND INVESTMENTS COMMITTEE

4 September 2019

Report of the Director of Finance & ICT

INVESTMENT REPORT

1 Purpose of the Report

To review the Fund's asset allocation, investment activity since the last meeting, long term performance analysis and to seek approval for the investment strategy in the light of recommendations from the Director of Finance & ICT and the Fund's independent adviser.

2 Information and Analysis

(i) Report of the External Adviser

A copy of Mr Fletcher's report, incorporating his view on the global economic position, factual information for global market returns, the performance of the Fund and his recommendations on investment strategy and asset allocation, is attached as Appendix 1.

(ii) Asset Allocation and Recommendations Table

The Fund's latest asset allocation as at 31 July 2019 and the recommendations of the Director of Finance & ICT and Mr Fletcher, in relation to the Fund's new strategic asset allocation benchmark, which became effective on 1 January 2019, are shown in the table overleaf.

The table also shows the recommendations of the Director of Finance & ICT, adjusted to reflect the impact of future investment commitments. These commitments (existing plus any new commitments recommended in this report) relate to Private Equity, Multi-Asset Credit, Property and Infrastructure and total around £320m. Whilst the timing of drawdowns will be lumpy and difficult to predict, the In-house Investment Management Team (IIMT) believes that these are likely to occur over the next 18 to 36 months.

Total Investment Assets totaled £5,173.8m at 31 July 2019

(1) Recommendation adjusted for investment commitments at 31 July 2019 and presumes all commitments are funded from cash.

(2) Benchmark Return for the three months to 30 June 2019.

(3) The maximum permitted range in respect of Property is +/- 3%.

The table above reflects the following three categorisations:

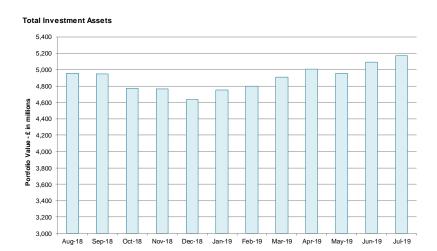

- **Growth Assets**: largely equities plus other volatile higher return assets such as private equity;
- **Income Assets**: assets which are designed to deliver an excess return, but with more stable return patterns than Growth Assets because income represents a large proportion of the total return of these assets; and
- Protection Assets: lower risk government or investment grade bonds.

Relative to the new benchmark, the Fund as at 31 July 2019, was overweight Cash, and underweight in Growth Assets, Income Assets and Protection Assets.

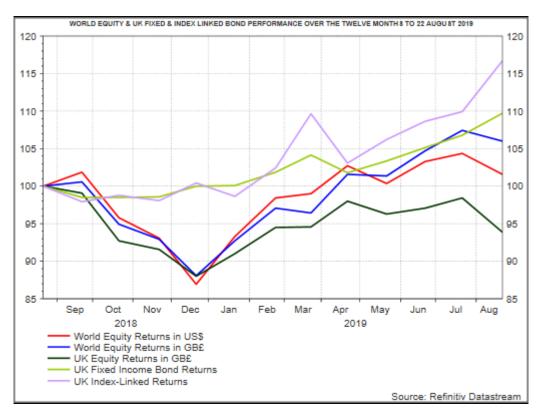

If all of the Fund's commitments (existing plus any new commitments recommended in this report) were drawn-down, the cash balance would reduce by 8.2% to -0.8%. However, in practice as these commitments are drawn-down, they will be partly offset by new net cash inflows from dealing with members, investment income, distributions from existing investments and changes in the wider asset allocation.

(iii) Total Investment Assets

The value of the Fund's investment assets rose by £169.6m (3.4%) between 30 April 2019 and 31 July 2019 to a little under £5.2bn, comprising a noncash market gain of around £150m and cash inflows from dealing with members & investment income of around £20m. Over the twelve months to 31 July 2019, the value of the Fund's investment assets has risen by £231.4m (4.7%), comprising a non-cash market gain of around £160m and cash inflows from dealing with members & investment income of around £160m and cash of around £100m and cash inflows from dealing with members & investment income of around £20m. A copy of the Fund's valuation is attached at Appendix 2.

The Fund's valuation can fluctuate significantly in the short term, reflecting market conditions and supports the Fund's strategy of focusing on the long term.

(iv) Market returns over the last 12 months

The chart above shows market returns for Global Equities in Sterling and the US dollar, UK Equities, UK Fixed Income and UK Index Linked bonds for the twelve months to 22 August 2019.

Global Equity markets sold-off sharply in Q4 2018, with the quarter recording a 10.5% fall in sterling terms. Investor confidence was impacted by a number of factors, including concerns over the sustainability of US economic growth; an indication from the US Federal Reserve that there was scope for further interest rate rises; worries over a slowdown in China; and fears of a global trade war.

Equity markets recovered strongly in Q1 2019, with the FTSE All World Equity Index returning +12.2% in US Dollar terms; +9.6% in Sterling terms. Whilst global economic data moderated in the quarter, optimism that trade relations between the US and China might improve, together with a more dovish tone from the US Federal Reserve (the Fed), lifted equity markets.

Equity markets generally rose in Q2 2019 (FTSE All World +3.8% in local currency terms), and sterling investors also benefited from a weaker pound (FTSE All World +6.2% in sterling terms). Following further positive returns in July 2019 (FTSE All World +4.2% in sterling terms), equity markets sold off in early August 2019 following a further escalation in the US – China trade negotiations, reducing optimism about dramatic monetary policy easing from

the Fed, and growing concerns over the health of the global economy (FTSE All World -2.8% in sterling terms in August 2019 to 22nd of the month).

Bonds yields have fallen since September 2018 (pushing up prices and returns), reflecting market uncertainty and increased demand for safe-haven assets, together with more dovish tones from central banks in response to weaker economic news. UK bond yields fell sharply in July and early August 2019 reflecting growing concerns over the health of the UK economy and the risk of a "no-deal" Brexit.

The US Federal Reserve reduced its Fed Funds Rate by 25 basis points to 2.25% in July 2019, and announced that it would end the Quantitative Tightening programme on 1 August 2019. Jerome Powell, the Fed chair, noted that weak global growth and the US - China trade war had been disruptive for the world economy and was impacting on growth in America, despite the US labour market remaining strong with the lowest unemployment rate since the late 1960s. Mr Powell also noted that the Fed "will continue to monitor the implications of incoming information for the economic outlook and will act as appropriate to sustain the expansion".

Mario Draghi, the European Central Bank President, has hinted that monetary policy may be eased going forward to provide market stimulus. The Bank of England's August 2019 Inflation Report noted "an increase in the perceived likelihood of a no-deal Brexit has further lowered UK market interest rates and led to a marked depreciation of the sterling exchange rate". The Bank of England noted that the monetary policy response to Brexit, whatever form it takes, will not be automatic and could be in either direction, and in all circumstances the MPC will set monetary policy appropriately to achieve the 2% inflation target.

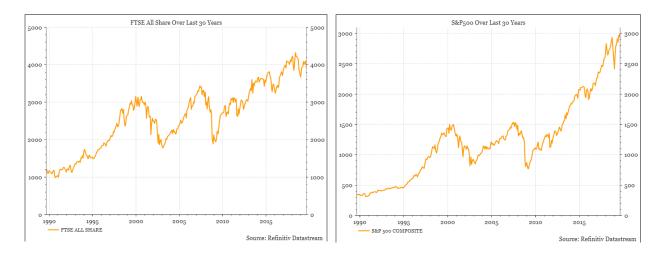

The Bank of Japan maintained its short-term interest rate target at -0.1% and a pledge to guide 10-year government bond yields to around 0%, and recently noted that it would ease "without hesitation" if the economy loses momentum in achieving the 2% inflation target.

Since September 2018, the 10 year US Treasury yield has fallen by 147 basis points from 3.06% at 30 September 2018 to 1.59% at 23 August 2019; the 10 year UK Gilt yield has fall by 105 basis points from 1.57% to 0.52% over the comparable period. Furthermore, both the US and UK yield curves have "inverted" over recent months; this is an unusual situation, where short-dated bonds yield more than longer-dated bonds, and is often seen as an indicator of a potential recession. Although it should be acknowledged that the current

inverted yield curves could be distorted by the level of quantitative easing which has taken place since the start of the global financial crisis.

Sterling investment grade credit outperformed UK government debt in Q2 2019, with credit spreads narrowing by around 7 basis points to 1.25% by the end of the quarter. Whilst returns have also been positive in Q3 2019 to date, these have lagged behind UK government bond returns.

Asset class weightings and recommendations are based on values at the end of July 2019, and are relative to the new strategic asset allocation benchmark which became effective on 1 January 2019. Many global stock markets are still trading close to all-time highs, despite the recent weakness in August 2019, and it should be noted that recent asset class returns (see charts below which show the long term performance of the FTSE All Share and S&P 500 Composite) remain well in excess of long term averages.

(v) Longer Term Performance

Figures provided by Portfolio Evaluation Limited show the Fund's performance over 1, 3, 5 and 10 years to 30 June 2019.

Per annum	DPF	Benchmark Index	
1 year	5.0%	4.5%	
3 year	9.6%	8.7%	
5 year	8.7%	8.2%	
10 year	10.2%	10.0%	

The Fund out-performed the benchmark over all time periods.

(vi) Category Recommendations

	Old Benchmark	New Benchmark	Fund Allocation	Permitted Range	Recommendation			Benchmark Relative Recommendation	
			31 Jul-19		AF	DPF	AF	DPF	
Growth Assets	62.0%	57.0%	56.0%	± 8%	57.0%	56.0%	-	(1.0%)	
Income Assets	18.0%	23.0%	19.5%	± 6%	23.0%	20.8%	-	(2.2%)	
Protection Assets	18.0%	18.0%	17.3%	± 5%	16.0%	17.3%	(2.0%)	(0.7%)	
Cash	2.0%	2.0%	7.2%	0 - 8%	4.0%	5.9%	+2.0%	+3.9%	

The new strategic asset allocation benchmark reflects a re-balancing of the Fund's assets from Growth Assets to Income Assets, and also introduces a new 3% allocation to Global Sustainable Equities.

At an overall level, the Fund was overweight Cash at 31 July 2019, and underweight Growth Assets, Income Assets and Protection Assets, although if commitments waiting to be drawn down were taken into account, the Fund would move to an overweight position in Growth and Income Assets. The table on page 2 assumes that all new commitments will be funded out of the current cash weighting; in practice as private market commitments are drawn down they are likely to be funded partially out of cash and partially by distributions (income and capital) from existing investments and sales of public market assets. The Fund has progressively reduced its exposure to Growth Assets over the last two years, as equity valuations have become increasingly stretched, and increased the allocation to Income Assets and Protection Assets.

The IIMT recommendations reflected in this report: maintain Growth Assets at 56.0% (1.0% underweight), albeit the regional composition is changed from the current allocation as follows: North American Equities -0.1%; European Equities -1.1%; Japanese Equities - 0.5%; Asia Pacific Equities -1.3%; and Global Sustainable Equities +3.0%); increase Income Assets by 1.3% (Infrastructure +0.7% and Multi-Asset Credit +0.6%); hold Protection Assets at 17.3%; and reduce Cash by 1.3%. The IIMT notes that the recommendations are subject to market conditions, which could be significantly impacted in the short term by Brexit uncertainty and developments in US – China trade negotiations, and flexibility will be required to respond to the resultant market conditions. Furthermore, a proportion of the

equity sales will be dependent on the investment of the proposed new 3.0% allocation to Global Sustainable Equities which is subject to the completion of satisfactory due diligence, including the finalisation of the non-DCC framework by the provider.

The IIMT continues to recommend a defensive cash allocation, believing that public markets continue to trade on rich valuations and appear too sanguine about the level of global political risk which has continued to increase over the summer months. Furthermore, as noted above, the cash weighting will be reduced as the Fund's current commitments are drawn down.

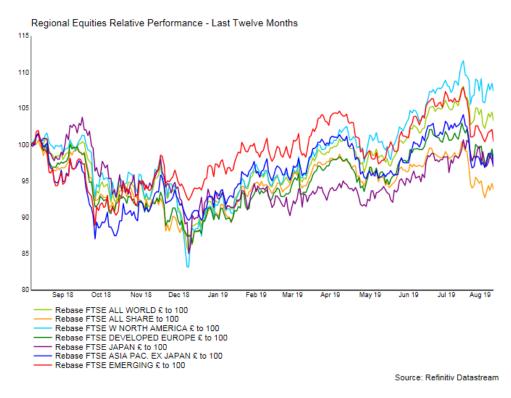

(vii) Growth Assets

At 31 July 2019, the overall Growth Asset weighting was 56.0%, down from 59% at 30 April 2019, reflecting relative market strength and divestment of £150m following market strength in the run up to the Fed's monetary policy announcement at the end of July 2019.

The IIMT recommendations below maintain the overall Growth Asset weighting at 56.0%, 1.0% underweight relative to the benchmark. The IIMT believes that a small underweight position is warranted due to rich equity valuations, the increasingly late cycle nature of the global economy and the increased level of political risk.

The Chart opposite shows the relative regional equity returns over the last twelve months, and the chart overleaf, shows the returns since the last Committee meeting. Global Equity markets returned +6.2% in Sterling terms in Q2 2019 (3.8% in local currency terms), and 18.8% in 2019 YTD (12.3% in local currency).

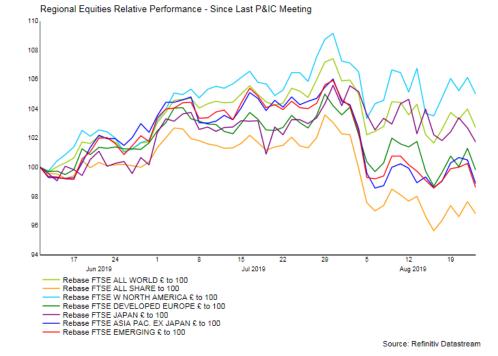

In local currency terms, European Equities were the best

performer in Q2 2019, returning 4.8%, whereas Japan was the worst performing region with a return of -2.2%. Sterling returns in Q2 2019 benefited from a weaker pound, with European and Japanese Equities returning 8.6% and 2.9% over the quarter.

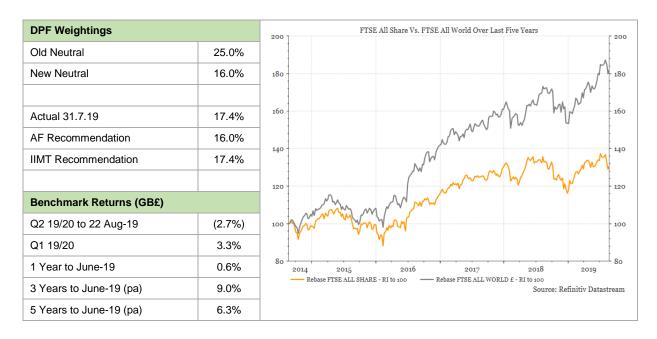

During August (to 22 August 2018), equity returns were negative across all regions in local currency terms, ranging from -5.5% in Emerging Markets to -1.9% in North America; the dollar was slightly weaker against the pound over this period.

UK Equites underperformed the majority of global equity markets over this period, down 4.6%, as a slow-down in the UK economy (GDP contracted by 0.2% in Q2 2019), together with growing concerns about the possibility of a "no-deal" Brexit, weighed on investor sentiment that was already impacted by global concerns.

9

United Kingdom Equities

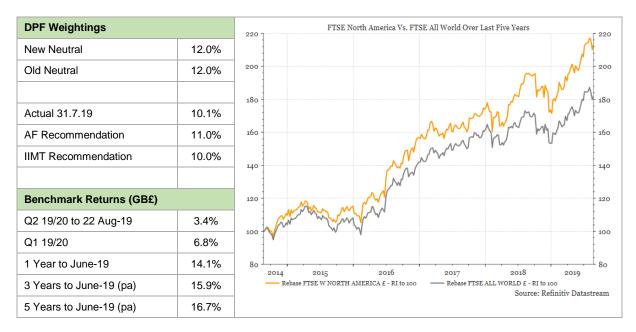

Whilst there were no transactions in the period, relative market weakness reduced the weighting in UK Equities from 18.1% at 30 April 2019 to 17.4% at 31 July 2019; 1.4% overweight relative to the benchmark.

Mr Fletcher recommends a neutral weighting of 16% in UK Equities and notes that whilst progress is being made to bring the UK allocation down, this will take time. Mr Fletcher notes that some asset managers believe that the UK market is cheap on a relative basis, with the FTSE All Share underperforming the MSCI All World Index since the EU referendum. However, Mr Fletcher further notes that this reflects the uncertainty surrounding the Brexit negotiations, the increased levels of political uncertainty and the weaker global outlook.

The IIMT notes that the UK GDP contracted by 0.2% in Q2 2019 (+1.2% on an annualised basis) from 0.5% in Q1 2019 (1.8% on an annualised basis), albeit the labour market remains relatively robust. However, political uncertainty has increased following the election of a new leader for the Conservative Party, in particular with regard to the Brexit negotiations and the possibility of a "no-deal" Brexit.

The IIMT recommends that the current 1.4% overweight position relative to benchmark is maintained as UK equity valuations and dividend yields are attractive on both an absolute basis and on a relative basis compared to other equity markets and the dollar exposure of the FTSE 100 index offers some protection in the event of a 'no-deal' Brexit.

North American Equities

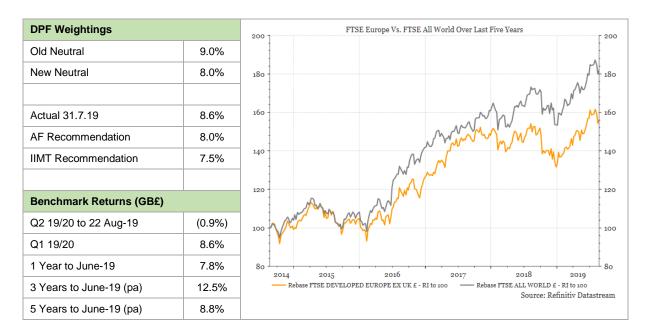

Divestment of £50m immediately prior to the period end, reduced the Fund's North American Equity weighting to 10.1% at 31 July 2019, 1.9% underweight.

Mr Fletcher notes that due to the continued strong performance of the US market on an absolute and relative basis, together with the potentially poor future prospects, the Fund should be underweight in this area. However, Mr Fletcher has reduced his underweight recommendation from 2% to 1% to reflect the fact that the US still has stronger near term growth prospects relative to the rest of the developed world.

The IIMT concurs with Mr Fletcher and believes the US economy is now late cycle, and notes that equity valuations are increasingly unsupported by forward earnings growth. Furthermore, the on-going US – China trade negotiations are increasingly weighing on investor sentiment, and these are set against a general backdrop of heightened political uncertainty.

The IIMT believes that the sharp rise in the US equity market since the start of the calendar year (+22.6% in sterling terms; +16.9% in local currency) supports an underweight position, and recommends that the Fund's position is reduced by a further 0.1% to 10% (2% underweight).

European Equities

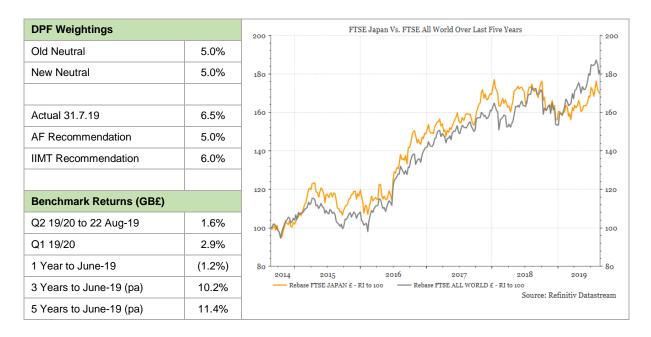

Divestment of £100m immediately prior to the period end, reduced the Fund's European Equity weighting to 8.6% at 31 July 2019, 0.6% overweight.

Mr Fletcher recommends a neutral position of 8%, noting that the German economy contracted by 0.1% in Q2 2019 as exports slumped, Italy stagnated, and France, along with the majority of European economies, saw its growth rate fall. Mr Fletcher also notes that because the region relies on exports and global trade, growth could suffer should the trade negotiations between the US and China not be resolved quickly and amicably.

The IIMT believes that the sharp rise in the European Equity market (+16.4% in sterling terms; 14.2% in local currency terms since the start of the calendar year) represents an opportunity to "lock-in" some further profit and recommends reducing the current weighting by 1.1% to 7.5%; (0.5% underweight). Whilst the European Central Bank continues to support the Eurozone economy via accommodative monetary policy, the Eurozone economy has slowed significantly over the last year (growth fell to 0.2% in Q2 2019). Combined with on-going political uncertainty, and with the potential impact of Brexit, these factors are likely to cause periods of heightened uncertainty and volatility.

Furthermore, sluggish inflation and the inability of the European Central Bank to increase interest rates to date from their record lows, means that there is little flexibility to lower rates to stimulate growth should economic growth remain subdued.

Japanese Equities

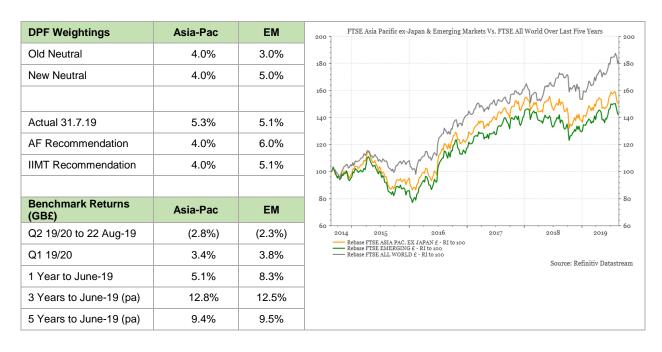

Whilst there were no transactions in the three months to July 2019, relative market strength increased the weighting by 0.1% to 6.5% at 31 July 2019; 1.5% overweight against the benchmark.

Mr Fletcher believes that the weaker outlook for global trade and industrial production caused by the on-going US – China trade negotiations could have an adverse impact on Japan (together with Europe and Asia Pacific). As a result, Mr Fletcher has reduced his Japanese Equity weighting from 1.0% overweight to a neutral position of 5%.

The IIMT notes that the Japanese economy continues to remain reasonably resilient (Q1 & Q2 2019 GDP growth of 0.6% and 0.4%, respectively) and this should allow Prime Minister Abe to press ahead with is on-going political and structural reforms. The IIMT believes that the long term story in Japan remains intact, with structural changes in governance, the labour market and productivity. Furthermore, valuations remain attractive relative both to their historical ranges and other developed markets, and the diversifying and defensive qualities of the Japanese market (e.g. the safe-haven status of the ¥) provide investment support.

However, the latest Takin survey showed that sentiment amongst the large manufacturers has slipped to its lowest level in three years. It is also unclear what impact, if any, the upcoming planned increase in sales tax from 8% to 10% will have on domestic consumption, together with the uncertainty caused by the ongoing US – China trade negotiations. As a result, whilst the IIMT believes that an overweight position remains appropriate, the IIMT

recommends that the allocation is reduced by 0.5% to 6.0%; 1.0% overweight overall.

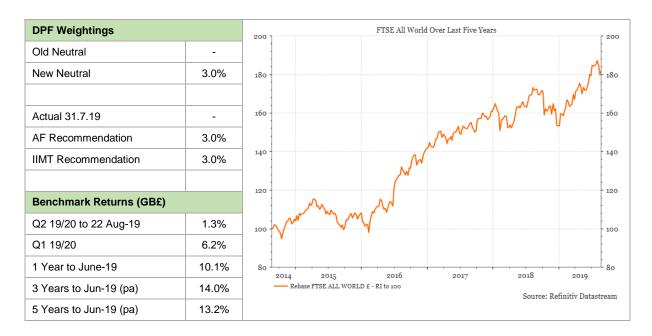

Asia Pacific Ex-Japan and Emerging Market Equities

Relative market strength increased the Fund's allocation to Asia Pacific Ex-Japan Equities and Emerging Market Equities by 0.1% and 0.2%, to 5.3% and 5.1% at 31 July 2019, respectively.

Mr Fletcher has reduced his allocation in respect of Asia Pacific Ex-Japan Equities from 1% overweight to neutral reflecting the potential impact of the US – China trade negotiations on global trade and industrial production. However, Mr Fletcher, continues to have long term confidence in the growth prospects for the emerging economies. Following the recent reduction in US interest rates, together with expectations of a further 50 basis points reduction priced into market expectations, the US dollar is likely to weaken which should have a positive impact on emerging markets. Despite the increased uncertainty, Mr Fletcher notes that emerging market equity remains cheap on a relative valuation basis, and recommends an overweight allocation, albeit reduced from 2% to 1%.

Whilst the IIMT continues to believe in the long term growth potential of these regions the short term outlook is less clear. There are signs of an economic slowdown driven by the threat of a global trade war, the strength of the US\$ and concerns about a slow-down in the Chinese economy.

As a result, the IIMT recommends that the Fund reduces the Asia Pacific Ex-Japan Equity weighting by 1.3% to take it to a neutral position, whilst maintaining the fractionally overweight positon in Emerging Market Equities.

Global Sustainable Equities

The new strategic asset allocation benchmark includes a 3% allocation to Global Sustainable Equities, and Mr Fletcher recommends a 3% neutral allocation. The Committee has previously approved the use a non-DCC framework to appoint two or three investment managers to manage the planned allocation on a discretionary basis and the IIMT is currently waiting for the non-DCC framework to be finalised. It is expected that this will happen in early September.

The IIMT is positive about the long term growth prospects for the asset class and recommends a neutral allocation of 3.0%. Whilst noting that completion of the necessary due diligence, and call-off from the non-DCC framework should result in investments being made into the asset class in late October, some flexibility will be required around the timing of any investment.

Private Equity

DPF Weighting							
Old New	New Neutral	Actual 31.7.19	Committed 31.7.19	AF Recommendation	IIMT Recommendation		
4.0%	4.0%	3.0%	4.7%	4.0%	3.0%		
Benchmark Returns (GB£)							
Q2 19/20 to date	Q1 19/20	1 Year to Jun-19	3 Years to Jun-19 (pa)	5 Years to June-19 (pa)			
(3.1%)	3.5%	1.6%	10.0%	7.0%			

The Private Equity allocation increased by 0.2% between 30 April 2019 and 31 July 2019 to 3.0%; 4.7% on a committed basis.

Mr Fletcher recommends a neutral weighting of 4% in Private Equity. The IIMT continues to seek out opportunities which offer higher returns than public markets, including co-investment and secondary funds, and recommend that the current invested and committed weightings are maintained while opportunities are assessed.

The IIMT notes that private equity dry powder and earnings multiples have increased over the last few years, and are now approaching record highs, particularly in respect of large and mega cap deals. The IIMT believes that there is limited scope for further commitments at this stage in the cycle, and is recommending a maintained weighting, albeit there remains some scope to invest in small and mid-cap private equity funds, which the IIMT believe offer better relative value. The IIMT also believes that consideration should be given to investing into listed small-cap stocks as an alternative, and this is currently under review as part of a LGPS Central Pool collaboration exercise.

(viii) Income Assets

At 31 July 2019, the overall weighting in Income Assets was 19.5%, up from 18.1% at 30 April 2019, principally reflecting net investment of over £85m. The IIMT recommendations below would take the overall Income Asset weighting to 20.8%, and the committed weighting to 25.3%.

Multi Asset Credit

DPF Weighting								
Old Neutral	New Neutral	Actual 31.7.19	AF Recommendation	IIMT Recommendation				
4.0%	6.0%	5.5%	6.0%	6.1%				
	Benchmark Returns (GB£)							
Q2 19/20 to 22 Aug-19	Q1 19/20	1 Year to June-19	3 Years to June-19 (pa)	5 Years to June-19 (pa)				
0.5%	0.9%	3.8%	3.6%	n/a				

Net investment of £50m immediately prior to the period end increased the invested weighting from 4.5% at 30 April 2019 to 5.5% at 31 July 2019; 7.4% on a committed basis versus a neutral weight of 6%.

Mr Fletcher recommends a neutral 6% allocation to Multi-Asset Credit in order to increase the diversified opportunity set going forward.

The IIMT continues to remain positive about the long-term attractions of this asset class, but notes that high yield bond yields have rallied in YTD19 following a sharp "risk-off" fall in Q4 2018. The IIMT believes that whilst Multi-Asset Credit is likely to under-perform in a "risk-off" environment, the under-performance should be lower than that experienced by Growth Assets. The IIMT continues to prefer a bias towards defensive forms of credit (e.g. senior secured corporate or infrastructure debt with low default rates) with strong covenants, floating rate protection and a yield pick-up, whilst noting that both multiples and leverage are rising and investment needs to be supported by robust due diligence.

The IIMT recommends increasing the invested weighting by a further 0.6% to 6.1% in the upcoming quarter (0.1% overweight) to cover existing commitment draw-downs and further investment into a diversified credit fund. The IIMT also recommends that the Fund's commitment to one of the portfolios existing private debt funds is increased by £20m subject to suitable top-up due diligence. This would increase the Fund's total committed weighting to Multi-Asset Credit to 8.3%. Whilst this implies the pension fund will be 2.3% overweight should all the commitments be drawn-down, in practice it is unlikely that the commitments will be fully drawn, and some of the existing closed-ended investments have now entered their distribution phase (i.e. returning cash to investors).

Property

DPF Weighting								
Old Neutral	New Neutral	Actual 31.7.19	AF Recommendation	IIMT Recommendation				
9.0%	9.0%	8.0%	9.0%	8.0%				
	Benchmark Returns (GB£)							
Q2 19/20 to 22 Aug-19	Q1 19/20	1 Year to June-19	3 Years to June-19 (pa)	5 Years to June-19 (pa)				
Not Available	0.6%	3.1%	3.1%	5.8%				

The Fund's allocation to Property increased by 0.1% between 30 April 2019 and 31 July 2019 to 8.0%, with net investment of around £18m (Direct Property £14m & Indirect Property £4m) being partly offset by relative market weakness. Direct Property accounted for 4.7% (0.3% underweight) and Indirect Property accounted for 3.3% (0.7% underweight). The committed weight was 8.4% at 31 July 2019. The Direct Property investment in the period related to the acquisition of a multi-storey car park in Leicester let to a leading industry operator.

Mr Fletcher notes that the property market continues to provide diversified returns for the Fund and that the Direct Property Manager has outperformed. Mr Fletcher continues to recommend a neutral overall allocation to Property, with a preference for a 1% overweight position in Direct Property and a 1% underweight in Indirect Property. Mr Fletcher recognises that it will take time to build the property allocation to a neutral position.

The IIMT recommends maintaining the current 4.7% allocation to Direct Property while the Property Manager continues to seek out attractive propositions. The Property Manager notes that Brexit uncertainty continues to have a marked effect on property investment transaction levels, with a sharp fall in the value of deals in Q1 and Q2 2019. During the first half of 2019, total activity was £16.8bn, almost 40% lower than the same period last year and the weakest first half year since 2012. The Property Manager believes that this situation is unlikely to change until Brexit is resolved. Buyers are ideally waiting for Brexit to be concluded before entering the market, especially as prices could fall, and venders are generally unwilling to sell in this market unless forced to do so as a result of redemption requests.

The IIMT continues to assess indirect property opportunities, with a focus on vehicles invested in specialist areas which provide strong covenants and sustainable rental growth. The IIMT recommends maintaining the Indirect

Property weighting at 3.3% (3.7% on a committed basis), whilst actively investigating further investment opportunities in this asset class.

Infrastructure

DPF Weighting								
Old Neutral	New Netural	Actual 31.7.19	Committed 31.7.19	AF Recommendation	IIMT Recommendation			
5.0%	8.0%	6.0%	8.6%	8.0%	6.7%			
	Benchmark Returns (GB£)							
Q2 19/20 to 22 Aug-19	Q1 19/20	1 Year to June-19	3 Years to June-19 (pa)	5 Years to June-19 (pa)				
0.5%	0.7%	2.8%	2.6%	2.1%				

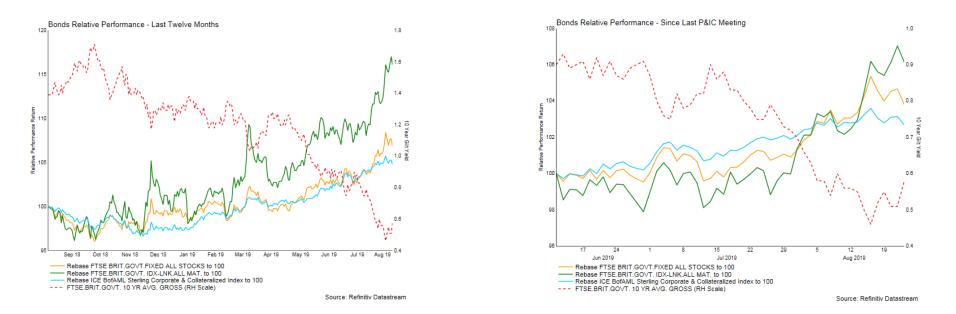

Investment in the three months to April 2019 totalled £20m, and the invested weighting increased to 6.0%; 8.6% on a committed basis.

Mr Fletcher recommends a neutral weighting of 8% relative to the benchmark, acknowledging that this will take time to achieve.

The IIMT believes that Infrastructure is an attractive asset class, with a bias towards core infrastructure assets which offer favourable risk-adjusted returns, predictable long term cash flows which are often linked to inflation, and low correlation to other major asset classes. The IIMT continues to assess future investment opportunities in line with these objectives, and also recommends that rising levels of political and regulatory risk are managed through increased levels of geographical diversification.

The IIMT recommends increasing the invested weighting by 0.7% to 6.2% in the upcoming quarter, in anticipation of existing commitment draw-downs and several other investment opportunities. Due diligence is also ongoing on a number of closed-ended fund opportunities, and it is anticipated that these will lead to a future commitments over the coming months.

(ix) Protection Assets

The weighting in Protection Assets at 31 July 2019 was 17.3%, up from 16.9% at 30 April 2019, reflecting relative market strength. There were no transactions in the period.

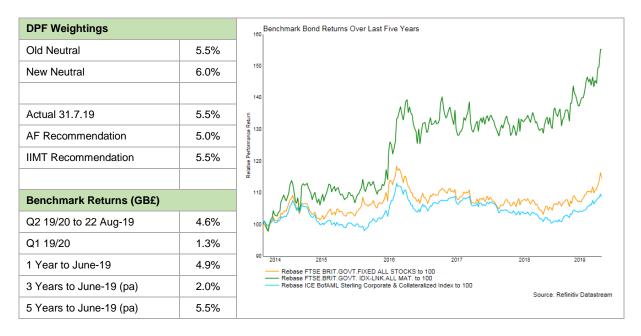

The IIMT recommendations below maintain the weighting at 17.3%.

The charts above show the relative bond returns over the last twelve months, and since the last Committee meeting.

The UK 10 year government bond yield has fallen (i.e. prices rose) sharply since late May 2019 by around 60 basis points as economic activity slowed and uncertainty about the UK's departure from the EU intensified.

The current UK 10 year government bond yield is currently trading at 0.52% (23 August 2019) having hit an intra-day low of 0.405% in mid-August, and around 30% of global government bonds now have negative yields.

Conventional Bonds

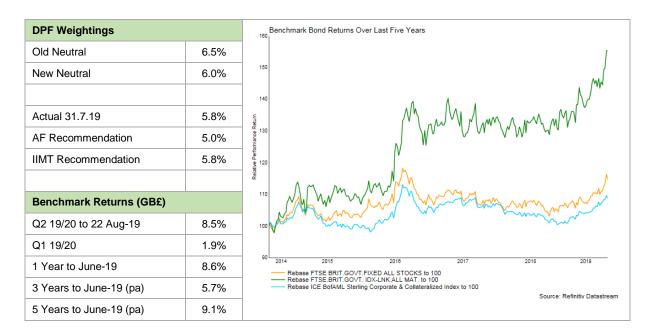

Whilst there were no transactions in the period, relative market strength increased the weighting in Conventional Bonds to 5.5% at 31 July 2019; 0.5% underweight.

Mr Fletcher recommends a 1.0% underweight position of 5.0% against the benchmark. Mr Fletcher notes that since the last Committee meeting, the global economy has slowed and UK inflation remains benign and below the monetary policy target rate of 2%. Government bond yields have fallen and are now lower than cash rates in most of the developed economies. Mr Fletcher finds it difficult to believe that government bond yields can fall below their current level (except in the US) over the medium term, nor can he see credit spreads substantially narrower. He notes that over the last few months the world's major central banks have returned to monetary accommodation; which has driven German and Japanese bond yields into negative territory and has pushed the 10 year UK Government bond yield to a new "all time low', of 0.48% (subsequent to the completion of Mr Fletcher's report the yield fell further to 0.405% intraday). Mr Fletcher continues to believe that government bond yields are too low, and recent moves (i.e. bond yields falling further) are an over-reaction which will unwind over the coming months. As a result, Mr Fletcher expects government bond yields to rise, resulting in negative total returns, and therefore proposes remaining underweight to government bonds.

Whilst the IIMT agrees that conventional sovereign bonds do not appear to offer good value at current levels, they are diversifying assets and continue to afford greater protection than other asset classes in periods of market

uncertainty – as demonstrated in the recent Q4 2018 and August 2019 global equity market sell-off and during periods of heightened Brexit uncertainty. The IIMT recommends maintaining the current weighting of 5.5%, 0.5% underweight relative to the benchmark.

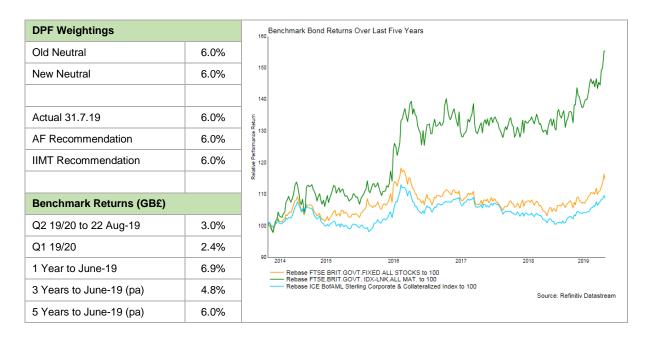

Index-Linked Bonds

Relative market strength increased the weighting in Index Linked Bonds to 5.8% at 31 July 2019; 0.2% underweight. There were no transactions in the period.

Mr Fletcher notes that UK Index-Linked gilts have now become even more expensive, and the long duration of these bonds increases the risk of adverse returns in a rising yield environment. Mr Fletcher believes that it is appropriate to be underweight in this asset class, and recommends a 1.0% underweight position of 5%, and that the Fund should continue to hold some US TIPS (US Index Linked Bonds) as well as UK Index Linked.

The IIMT agrees with Mr Fletcher regarding the current value of UK Index-Linked Bonds and recommends that the current 0.2% underweight position of 5.8% against the benchmark is maintained, with the current exposure to US TIPS (around 20% of the Index-Linked portfolio) being maintained due to the greater potential for price appreciation in US Index Linked Bonds.

Corporate Bonds

Whilst there were no transactions in the period, relative market strength increased the weighting in Corporate Bonds at 31 July 2019 to 6.0%; neutral with the benchmark.

Mr Fletcher notes that the current outlook for the investment grade nongovernment bond market is uncertain. Spreads have narrowed on stronger equity markets and the perceived end of monetary tightening has provided a duration benefit. Mr Fletcher notes that should government bond yields rise, investment grade credit yields will follow, and are likely to result in negative returns. Investment grade credit is also vulnerable because of the high leverage, low interest cover, particularly in the US, and reduced liquidity in all markets. However, despite these reservations, Mr Fletcher recommends a neutral allocation of 6% to investment grade credit because the "bigger risk" is in longer duration government bonds, especially UK Index-Linked Bonds.

The IIMT believes that whilst the current average credit spread, of around 120 to 130 basis points over sovereign bonds, is increasingly insufficient to compensate for the increased default and volatility risk, the current neutral allocation of 6% should be maintained in line with Mr Fletcher's recommendation.

(x) Cash

The Cash weighting at 31 July 2019 was 7.2%, 5.2% overweight relative to the benchmark. The Cash weighting partly reflected the divestment of £150m of equities immediately before the period end following market strength in the run up to the Fed's monetary policy announcement at the end of July 2019. Whilst £50m was reinvested into Multi-Asset Credit, the net impact of the trades increased the Fund's Cash weighting by 2.0%.

Mr Fletcher has increased his allocation to Cash from a neutral position of 2% to 4%, noting that the recent strength in the bond markets represents an extreme – the majority 10 year bond market yields are lower than cash yields and tactically Mr Fletcher prefers to be 2% underweight Protection Assets and 2% overweight Cash.

The IIMT notes that markets have experienced several bouts of volatility over the past twelve to eighteen months, and continues to believe that public markets are trading on rich valuations despite increasing levels of global political risk and the increasing maturity of the US economic expansion. Furthermore, the on-going political uncertainty in the United Kingdom, in particular with regard to the scheduled departure from the European Union on 31 October 2019, and the increased possibility of a "no-deal", is likely to weigh on investor sentiment over the next few months.

Against this background, the IIMT recommends a defensive cash allocation of 5.9%. Furthermore, it should be noted that the cash weighting will reduce as private market commitments are drawn down.

3 Other Considerations

In preparing this report the relevance of the following factors has been considered: financial, legal and human rights, human resources, equality and diversity, health, environmental, transport, property and prevention of crime and disorder.

4 Background Papers

Files held by the Investment Section.

5 Officer's Recommendations

- 5.1 That the report of the external adviser, Mr Fletcher, be noted.
- 5.2 That the asset allocations, total assets and long term performance analysis in this report be noted.
- 5.3 That the strategy outlined in the report be approved.

PETER HANDFORD

Director of Finance & ICT

Second Quarter 2019 Investment Report

PREPARED FOR:

Derbyshire County Council Pension Fund: Pensions and Investment Committee Meeting

SEPTEMBER 2019

This document is directed only at the person(s) identified on the front cover of this document on the basis of our investment advisory agreement. No liability is admitted to any other user of this report and if you are not the named recipient you should not seek to rely upon it.

This document is issued by Allenbridge, part of MJ Hudson. Allenbridge is a trading name of Allenbridge Holdings Limited (No. 10232597), Allenbridge Limited (No. 07435167) and AllenbridgeEpic Investment Advisers Limited (No. 04533331). All are registered in England and Wales. Allenbridge Limited and AllenbridgeEpic Investment Advisers Limited are appointed representatives of Allenbridge Capital Limited which is Authorised and Regulated by the Financial Conduct Authority. The Registered Office of Allenbridge Holdings Limited is 8 Old Jewry, London, EC2R 8DN.

Investment Report for Derbyshire County Council Pension Fund

This report has been prepared by Anthony Fletcher "External Investment Advisor" of Derbyshire County Council Pension Fund (the Fund). At the request of the Pension and Investment Committee the purpose of the report is to fulfil the following aims: -

- Provide an overview of market returns by asset class over the last quarter and 12 months.
- An analysis of the Fund's performance by asset class versus the Fund specific benchmark for the last quarter and the last 12 months.
- An overview of the economic and market outlook by major region, including consideration of the potential impact on the Fund's asset classes
- An overview of the outlook for each of the Funds asset classes for the next two years; and recommend asset class weightings for the next quarter together with supporting rationale.

Since the contents of this report have been dictated by the Pension and Investment Committee it does not contain performance data for longer periods in accordance with the requirements of the FCA Rules.

The report is expected to lead to discussions with the in-house team on findings and recommendations as required. The advisor is expected to attend quarterly meetings of the Pensions and Investment Committee to present his views and actively advise committee members.

Meeting date 4th September 2019 Date of paper 9th August 2019

1. Market Background (second quarter 2019)

The increased possibility of a slowdown in global economic growth remained the main concern for markets in the second quarter, despite this the majority of assets classes delivered strong positive performance. The main reason for this outcome was the decision by the US Federal Reserve and the other major central banks to talk up the possibility of lower rates in the case of the US and more QE in the case of the other central banks.

Bond yields fell on the promise of lower rates and more monetary accommodation and Equity markets rallied on the possibility of an extension to the business cycle and the increased chance of the US avoiding a recession in the next 2 years with a "soft landing" in economic activity.

Global equity markets made gains over the quarter even if Mr Trump's periodic interventions in the ongoing US-China trade negotiations caused the markets to be volatile. The S&P 500 ended the quarter up 3.1%, in local currency terms. European stocks performed similarly well, with the Euro STOXX 50 index gaining 5.1% over the course of the quarter.

In the UK, the FTSE 100 made gains of 2.7% and the FTSE All Share 3.3%. Year to date the UK equity market at the end of June is 10% higher. This is despite negotiations with Europe costing the conservative party its second Prime Minister since the referendum and ushering in the potential of Boris Johnson being most likely to replace her, thereby increasing the risk and uncertainty surrounding Brexit.

While the Federal Reserve did not cut rates during Q2, it strongly indicated that cuts may happen in the near future. As a result longer dated bond yields fell sharply and the yield curve became inverted, i.e. 10 year yields are now lower than shorter dated bond yields. The interest rate markets have priced in three cuts in US interest rates over the next year. The European Central Bank also suggested that monetary policy may be eased further in order to counter low and falling levels of inflation in the region. Table 2 below shows the changes in government bond yields and the yield of non-government bond indices over quarter. Corporate bonds had stronger returns than government bonds over the quarter, as credit spreads narrowed.

The comments from the Federal Reserve that rates could be cut in the near future led to the dollar losing some value over the quarter, but Sterling lost even more value as Brexit concerns remained prominent.

UK property price growth continued to be low during the second quarter. House prices in the UK rose by 0.3% (seasonally adjusted), meanwhile commercial property returns fell across the board, once again Brexit was cited as the main concern.

The potential worsening outlook for global growth and trade caused commodity markets to be weak the second quarter. Brent crude was down -2.7%, natural gas was down -13.3%, and copper was down -7.8%. However, gold had a particularly strong quarter with prices buoyed by US-China trade tensions, the weak dollar and possible interest rates cuts, gold ended the quarter 9.3% higher.

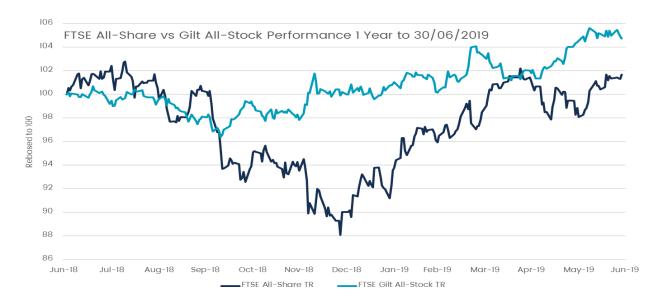

Table 1, below shows the total investment return in pound Sterling for the major asset classes, using FTSE indices except where noted; for the month of July, 3 and 12 months to the end of June 2019.

Recent developments (July and to 9th August 2019)

This feels like "groundhog day" just like April and May! July saw a continuation of the good market performance, driven by second quarter company earnings beating expectations and the pre-advised US rate cut of 0.25% being delivered at the end of the month. However in early August President Trump announced new tariffs on Chinese electrical goods, right in the middle of the latest round of negotiations. As a result at the time of writing equity markets are between 3% and 5% lower during August to date, credit spreads are wider and government bond yields are significantly lower.

Outside of the UK and Europe, which saw growth weaken, the rest of the world saw growth broadly in-line or better than expectations. Inflation data was benign and employment data remains robust, wages are growing and unemployment is still falling.

Following the European Parliamentary elections, the top jobs have been awarded to candidates that have strong opinions and interesting backgrounds. Potentially the most significant appointment for the investment markets was the appointment of Christine Lagarde (former head of the IMF) as Head of the ECB. Lagarde was the most "dovish" of the potential candidates and her expertise in political negotiations may have strengthened her case relative to the other candidates. This is important because it is clear that fiscal policy stimulus, as well as monetary policy stimulus, will be required to support the economic recovery of the region.

In the UK, Boris Johnson was elected by two thirds (about 90,000 people) of the Conservative party membership as leader and is now our new Prime Minister. While it appears that Mr Johnson's approach is more energetic, the problems remain. Europe is sticking to its position, Parliament is against leaving on Mrs May's deal and is even more against a no deal Brexit, but for now Mr Johnson is sticking with his mantra that the UK will leave on the 31st of October without the Northern Ireland backstop and with a better deal from Europe, or it will leave without a deal.

2. Investment Performance

Table 3, shows the performance of the Derbyshire Pension Fund versus the new fund specific benchmark for the 3 months to the end of June 2019 and compared to a combination of the New and Old benchmarks over 12 months. The Fund outperformed its benchmark over both 3 and 12 months. Measured against longer time horizons, more appropriate for Pension Fund performance, the Fund continues to deliver positive returns and has outperformed the strategic benchmark on rolling 3,5,10 years and since inception on a net of fees basis. Over 10 years the Fund has achieved a total return of 10.2% per annum. Over 3 and 12 months the PEL attribution data suggests Stock Selection remains the main contributor to the outperformance of the Fund.

Total fund value at 30th June 2019 £5,094 million

The second quarter saw a continuation of the positive absolute performance of the markets, with all asset classes delivering positive returns. All country equity market returns were similar over the quarter, but the weakness of sterling boosted the returns of Europe and the US. Protection and Income asset returns were more muted. With the exception of the UK equity all of our managers outperformed their market indices.

Over the year Protection and Income Assets outperformed Growth Assets. There was a huge variation in overseas equity returns with the US delivering +14% and Japan -1.2%, but partly due to the weakness of Sterling overseas equity markets produced the strongest average returns.

Growth assets - Equity performance

In line with the new strategic benchmark the exposure to UK equity was further reduced from 18.1% to 17.5%. The new strategic weight is 16%, therefore the fund remains relatively overweight. All other equity allocations were broadly unchanged. LGPS Central (the manager) underperformed the benchmark and the attribution analysis suggests that this was due to stock selection.

As can be seen in the table above all absolute and relative returns for overseas equities were positive over 3 months. Absolute returns over 12 months were positive, but relative returns from the US and Japan were negative.

North American equity, actively managed in a segregated portfolio (by Wellington) outperformed over the quarter but is still behind benchmark over 12 months. The continued performance recovery in 2Q19 has bought the 3 year returns up to 15.8% pa, broadly in line with the benchmark. Over 5 and 10 years, Wellington remains 1.0% and 1.5% ahead of benchmark.

The continental European equity portfolio is passively managed by UBS. The 3 and 12 month returns are in-line with the benchmark, as are the 3 and 5 year returns.

The other equity assets are invested in Japan, the Pacific Basin and Emerging Markets equities, via pooled funds selected by the in-house team. The allocation to Japan outperformed over 3 months, but underperformed its benchmark over 12 months, Japan remains ahead over 3, 5 and 10 years. Pacific Basin equity outperformed, the allocation has outperformed over all periods delivering strong absolute and relative returns. The recent stronger performance of emerging market equity has lifted absolute and relative returns. The allocation is now ahead of benchmark in all periods except rolling 5 years.

Private equity continues to deliver strong positive returns and has outperformed its benchmark over all periods.

As yet no allocation has been made to Sustainable Global Equity.

Protection assets - Fixed Income Performance

In the second quarter the bond portfolio delivered positive returns in-line with or slightly ahead of benchmark, although the inflation linked assets are slightly flattered by the US\$ performance of TIPS, because cost of hedging the currency shows up in the performance of cash. Over the 12 months absolute returns were strong and positive but mixed relative to the benchmark. Over the longer term,

while absolute returns are positive, asset allocation relative to the benchmark is the main reason for the underperformance.

Income assets - Property, MAC and Infrastructure

Over the quarter and the year, the total allocation to all property produced positive returns that were ahead of benchmark. Over the longer-term direct property investments have helped the allocation outperform the benchmark whereas indirect property returns have been more mixed.

Over all periods Infrastructure allocations produced positive returns well ahead of the benchmark.

The Multi-Asset Credit (MAC) allocation a combination of private debt, high yield and emerging market debt has outperformed in all periods, but it has only been an allocation in the fund for just over 3 years.

Asset Allocation

At the asset allocation level, the DPF's in-house team has made some excellent decisions. In general, over the medium to long term, being overweight "growth" assets like equities at the expense of "protection" assets like bonds, has been a good decision as would be expected given the higher levels of risk. Within bonds, the Fund could have benefitted from a higher allocation to non-government sectors, but this would have increased risk. On balance in terms of total return it has probably been better to use the money generated by being underweight bonds in general to invest in being overweight equity and increasing exposure in diversifying asset classes like property, infrastructure and MAC.

3. Economic and Market outlook

Economic background

The risks to the global economy have increased over the quarter and in particular into the months of July and August. Growth over the rest of 2019 and into 2020 is expected to be sub-trend with the global economy expected to grow at its slowest rate since the global financial crisis. At the same time the more unpredictable and heavy-handed nature of the US trade negotiations has increased the risk of an unintended outcome. The extended and erratic nature of the trade talks has already slowed global trade and increased uncertainty for businesses leading to lower business investment and sentiment. The longer the negotiations take the more corrosive they become for the economic outlook and the more likely they are to threaten growth.

In the meantime, helped by lower inflation the major central banks have responded to the slowdown by switching back to easing mode to try and smooth the path of growth, but what is really needed to reduce the risk to the global economy is a trade deal between the US and China. There is a chance that as we get closer to the start of the US Presidential Election campaign, Mr Trump will realise that the trade dispute is having a negative impact on the US economy and he will make a very big announcement about what will in effect may be a reasonable compromise.

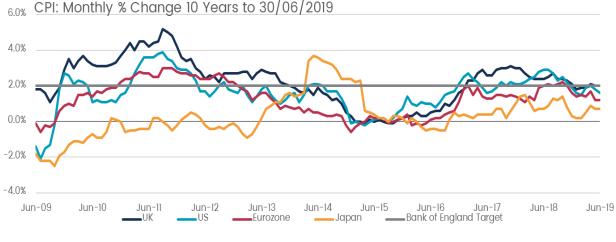

I believe the risks of a protracted negotiation are greater for the US and Mr Trump than it is for China. This is because the Chinese have more scope to stimulate growth by Fiscal and Monetary policy and weakening the currency. Also, President Xi Jinping does not need to be re-elected next year.

For now, just as last quarter, labour markets have held up well, with unemployment continuing to decline, to 7.5% in the Eurozone and to 3.7% in the US, as a result aggregate wage growth remains strong, this combined with a better consumer balance sheet means consumers may be willing to continue spending. The concern is that if global growth and international trade slows much more businesses may be less willing to recruit new workers and may even start laying people off.

The UK economy is still being supported by a strong labour market, unemployment troughed in May at 3.8% and while it ticked up to 3.9% in June, there are a record number of people in some form of employment in the UK and wages continue to rise by more than inflation. It is hoped that the contraction of growth seen in the second quarter is temporary, the result of planned shutdowns in the automotive sector and an offset to the stronger than expected first quarter caused by Brexit related stockpiling. I expect the heighted uncertainty and increased risk of a "no deal" Brexit following the election of Mr Johnson has done little to change aggregate business and consumer confidence.

As can be seen in chart 4 below, despite the late stage nature of the business cycle, which is exhibiting less slack in the major economies and the increase in real wages, the medium-term trend for inflation remains lower and central banks seem unable to achieve normalisation around their stated target inflation rates of 2%.

Chart 4: - Inflation, relative to the central bank target rate of 2%.

CPI: Monthly % Change 10 Years to 30/06/2019

Source: - Bloomberg

Central Banks

In the first half of the year the developed economies central banks talked about a change in direction of monetary policy from looking for reasons to tighten to looking for reasons to ease. At their respective meetings in late July and early August they started to deliver on those statements. The Fed cut its Fed Funds Rate by 0.25% from 2.5% to 2.25% and announced that it would end the QT programme on 1st August and not the end of September as previously indicated. What was a surprise was that in the post meeting press conference the chair of the FOMC, Mr Powell, said that the Fed would "act as appropriate" to sustain the country's longest economic expansion in history. Other comments about sluggish growth and low inflation enabling the Fed to take out an insurance cut in rates were to be expected, but a promise to keep the expansion going is unusual and must have been music to Mr Trump's ears. Mr Trump has been calling for more aggressive cuts for some time, his public interventions against Fed policy and Mr Powell in particular are generally considered unhelpful.

The ECB left rates unchanged but changed its rhetoric to say it was "determined to act" Mr Draghi mentioned several times that falling inflation could lead it to act to cut rates in some way in September. The Bank of Japan did not change its very easy monetary policy stance, but policymakers underlined that they would not hesitate to take additional easing measures "if the economy loses momentum for achieving the central bank's 2% inflation target".

Following the August Inflation Report, the Bank of England's Monetary Policy Committee voted unanimously to hold the Bank Rate at 0.75% and reaffirmed its pledge to gradual and limited rate rises assuming a smooth Brexit outcome and some recovery in global growth. The BoE lowered its UK GDP forecasts to 1.3% for 2019 and 2020 on the back of slower export growth and weak business investment. It also warned that the UK has a one in three chance of slipping into recession as the uncertainty over Brexit increases. In Interviews after the meeting, Mr Carney sounded more willing to cut rates and subsequently the BoE has talked about a return to QE via corporate bond purchases.

Politics

In early August, just as the US and Chinese trade negotiating teams were returning to the table, Mr Trump announced via twitter that he would impose from the 1st September 2019 10% tariffs on the remaining US\$ 300billion of Chinese exports to the US. This was despite agreeing at the summit in June that there would be no new tariffs. These tariffs will largely affect electrical goods, mobile telephony and toys. He has also asked the US Treasury to investigate China for currency manipulation. These actions will not be taken well by the Chinese, as it suggests Mr Trump is an unreliable negotiating partner. China is now considering further tariffs on US trade; they are considering both stopping the purchase of certain US products and stopping the sale to US companies of key raw materials like rare-earth elements used in the electronic industries. China is a top-down centralised economy, so if they decide to take these actions it will happen.

As expected the European elections resulted in a smaller group of centre-right politicians, as a wide range of Anti-Establishment candidates won seats. The UK Brexit party ended up with 26 MEPs, the largest representation from the UK, the Liberal Democrats also increased their number of MEPs, at the expense of the Conservative, Labour and UKIP parties. In spite of the change in make-up of the parliament, the new Leadership team has been chosen from the old guard of senior European politicians. Ursula von der Leyen, European Commission president: - Ursula von der Leyen is a German politician from the CDU and was the minister of defence of Germany. Charles Michel, EU Council president: - Charles Michel was the prime minister of Belgium. Josep Borrell, EU foreign affairs chief: - Josep Borrell was the Spanish foreign minister. And Christine Lagarde former head of the IMF will take over from Mario Draghi as Head of the ECB. The new leadership team have already stated that there is no room for re-negotiation of the UK's Withdrawal Agreement (WA).

With summer recess and the Conservative leadership election, the UK Brexit negotiations remain on hold, with no apparent progress being made. The energetic Mr Johnson has appointed his new Cabinet, ramped up preparations for a no deal Brexit and made a number of crowd-pleasing announcements on public spending and Law & Order. He has reiterated his commitment to leaving the EU and his confidence that the UK will get a better deal than the WA with no Backstop, or the UK will leave with no deal on the 31st October 2019.

On the face of it the risk of a "No deal Brexit" has therefore increased, but the government only has a majority of 1 MP, including the MPs of the DUP. Whereas the disrupters in the last Government were Conservative Leavers the new disrupters will be Conservative Remainers and the arithmetic is similar. In parliament there is no majority for the WA and definitely no majority for a "No deal Brexit". Depending on opinion polls and the party conference season the more likely outcomes in my view are a snap general election or a further delay.

Government bonds

As can be seen in chart 5 below, 10 year government bond yields have continued their sharp move lower since the beginning of the year. As I said in my last report, "if the Fed actually cuts short term interest rates, US 10 year bond yields can go much lower". The surprise for me has been the size of the fall in yields outside of the US. 10 year German and Japanese yields have returned to negative territory and with each day that passes the UK 10 year gilt makes a new "all-time low" in yields. 10 year yields in all these markets are below overnight interest rates and the US 10's are lower in yield than the US 2 year yield. This inversion of yields has symbolic importance for the bond markets because it has been an indicator that a US economic recession is on the horizon.

Now that the Fed has started cutting interest rates, the markets are expecting 2 more cuts over the next 12 months. Other participants are pointing out that an inversion of 2y-10y yield curve is not a 100% reliable indicator of a recession and that other markets excesses are required, such as high levels of corporate debt, a slowdown in investment activity and rising unemployment. While others believe that QE and the amount of debt held by central banks makes the inversion argument less compelling. Either way I would argue the risk of recession in the next two years has increased.

If the Fed is right and this is just a "mid-course correction / insurance cut (or two)" they will have increased the likelihood of a soft landing and an extension of the current 10 year long US economic expansion. In which case government bond yields could be on their way back up again within 12 months leading to negative returns for investors. Either way I view the current level of government yields, especially outside the US as an extreme and expect yields to rise in the short term as well.

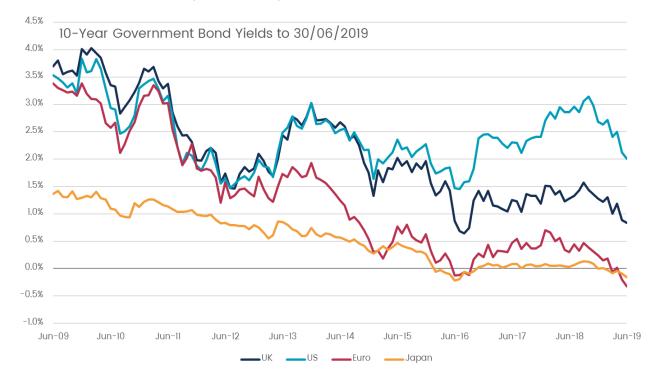

Chart 5: - Government bond yields, last 10 years.

Source: - Bloomberg

Non-government bonds

As can be seen in Chart 6 below, the excess yield spread at the end of the June for investment grade non-government bonds had fallen significantly since the beginning of the year. The current yield spread is somewhat higher the result of the recent escalation of the trade negotiations and the marked fall in underlying government bond yields.

As mentioned in my last report. for now the fears of increased corporate leverage (particularly in the US) and the lower average credit quality have been dissipated by the change in monetary policy. Given that the recent spread widening is mainly a result of a fall in government yields it is possible that spreads can narrow from here, this could be either the result of government bond yields increasing or corporate bond yields falling. On balance I believe it will be the former.

Just as for Government bonds there is also the chance that total returns for the rest of the year could be flat or even negative. Investment grade bonds (like government bonds) have quite high duration and insufficient yield to result in a positive total return in a rising yield environment. I haven't changed my mind on holding high yield bonds, because of their higher yield and lower duration they can deliver reasonable returns. For the time being the higher the coupon or yield, the higher the return, albeit with increased credit risk. See Table 7 below for an estimate of the impact of rising bond yields on UK Government and non-government bond markets.

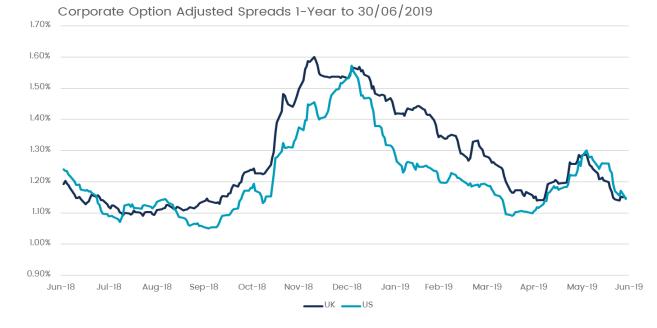

Chart 6: - Investment grade credit spreads, extra yield over government bonds.

Source: - Bloomberg

Equities

After the dip in May global equity markets bounced back in June and continued to rally until August. The S&P made a new "all-time high" just prior to the Fed announcement, but since then global equity markets have sold off between 3% and 5%, mainly because of Mr Trump's announcement of new tariffs on Chinese goods to be implemented in September. But I also believe the equity markets were expecting more from the Fed than the bond markets hence the initial selloff post the rate cut. Nonetheless a more Dovish Fed increases the chance of a soft landing in the US, easier European monetary and potentially fiscal policy, combined with the willingness of the Chinese to stimulate activity has increased the chances that equity markets can continue to deliver positive returns even if volatility is also higher.

As mentioned already the primary risk to this positive outlook remains the US, China trade negotiations. In the short-term Mr Trump's use of twitter to make announcements that often run contrary to the previous tweet on the subject is not helping the difficult negotiations of the trade delegation. In the medium term the longer these negotiations take the more likely the uncertainty is going to slow business activity and delay investment decisions. A further negative is that while 90% of companies reporting second quarter earnings in the US beat analyst expectations, actual earnings growth was negative for the second quarter in a row.

All this leads one to the conclusion that most of the good news is probably already in the price at this level of equity markets. I remain positive on equity markets expecting them to outperform bond markets over the medium and long term. In the short-term cash may prove to the safest place to be as the risks of some kind of correction have increased in both equity and bond markets.

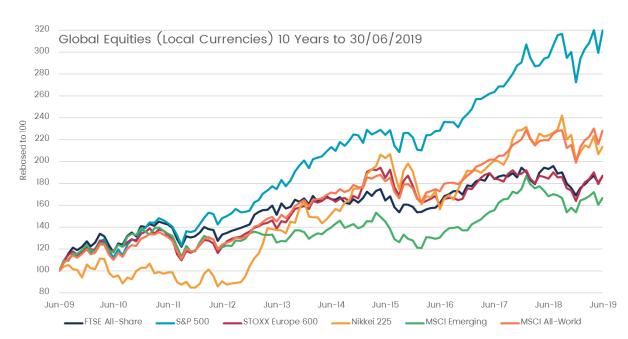

Chart 7: - Global equity indices, last 10 years.

Source: - Bloomberg

UK equity

Because most of the earnings of companies in the main UK equity indices come from overseas, the UK equity market has performed reasonably well in local currency terms over the last couple of years. However, the weakness of Sterling has made the total return of overseas equity markets look much better. Some asset managers believe the UK equity market is cheap on a relative basis, chart 7 above clearly shows that since the referendum the FTSE All share has underperformed the MSCI All World index. But there is good reason for that and that reason remains the same; we don't know the outcome of the Brexit negotiations. With the election of Mr Johnson, local factor uncertainty has increased compounding the increased uncertainty around the global outlook. The value of Sterling is likely to be the biggest mover and at 1.2 versus the US dollar the risk has become more asymmetric. If the result is no deal, forecasts are that GBP/USD could fall to 1.1, whereas if there is a deal it could rally towards 1.4.

Table 4: - GDP forecasts - Consensus versus Advisor expectations.

Source: - Consensus Economics July 2019

Consensus estimates for growth in 2019 have been tweaked higher and for 2020 they have been tweaked lowered, but I am not sure they have taken into consideration the increased risk posed by Mr Trump's more belligerent approach to the trade negotiations with China. Announcing against the advice of your own advisers and while your negotiating team is in front of their Chinese counterparts is potentially not the way to achieve a quick and positive outcome. For this reason the risk is it will take longer to reach a resolution and in the meantime the uncertainty for businesses is reducing their willingness to invest and could lead to workers being laid off. The change in direction of the Fed and other central banks could offset this weaker outcome and as mentioned above, may even deliver a "soft landing" i.e. the US could avoid a recession, but the risk of an unintended outcome has increased. I am therefore more cautious on global growth. In the UK second quarter growth was negative, most likely because of the stockpiling boost to first quarter growth. Brexit uncertainty has dramatically increased and is impacting UK investment and is another pressure on the weakening procyclical European economy. Chinese growth is also being impacted but they have plenty of scope to ease fiscal and monetary policy, whereas the major developed economies do not.

In the US, fourth quarter 2018 growth was revised down to 1.1% from the estimated 2.2%, a direct result of the government shutdown and first quarter 2019 growth was revised down to 3.1% from the advance estimate of 3.2% annualised. The initial estimate of second quarter growth was 2.1%. A continued rebound in personal consumption and government expenditure, boosted by delayed spending from the government shutdown, was offset by falling exports and inventory accumulation.

The preliminary estimate of UK GDP showed the economy grew by -0.2% in the second quarter of 2019. The first quarter was confirmed at 0.5%, this makes the annual rate of growth 1.2%, slightly lower than market expectations. A large part of the second quarter's weakness can be explained by stockpiling in the first quarter, but there was widespread weakness in the manufacturing, service and consumer sectors. I anticipate that growth will be lower in the UK over the rest of the year weighed down by Brexit induced lower investment and consumer confidence.

Japanese growth in the three months to the end of March 2019 was revised higher to a rate of +0.7%, a strong rebound in both household consumption and business investment was responsible. Second quarter growth from the same sources has continued and despite the weakness of Exports is estimated at 0.4%. This will bring to annual growth rate up to 1%.

Euro Area GDP was confirmed at 0.4% in the first quarter, but second quarter growth was only 0.2%, which represents a further slowing of growth from a rate of 1.2% to 1.1% for the previous twelve months. The German economy contracted by 0.1% as exports slumped, while Italy stagnated and France along with the majority of European economies saw their growth rates fall. The Euro Area, because of its reliance on exports and global trade, could see growth suffer if the trade negotiations between the US and China are not resolved quickly and amicably.

Consumer Price Inflation

Table 5, shows the consensus forecasts for Consumer Price Inflation in calendar 2019 and 2020 and my expectations in April and July 2019.

% CHANGE YOY									
	2019				2020				
	APRIL 2019		JULY 2	019	APRIL 2019 JULY		JULY 2	2019	
	Consensus	AF	Consensus	AF	Consensus	AF	Consensus	AF	
US	1.9	2.5	1.9	2.5	2.2	2.3	2.1	2.3	
UK	2.0	2.5	1.9	2.5	2.1	2.2	2.0	2.2	
Japan	0.6	1.1	0.6	1.1	1.0	1.1	0.8	1.1	
EU 28	1.5	1.9	1.5	1.9	1.7	1.9	1.4	1.9	

Table 5: - Consumer Price Inflation forecasts - Consensus versus Advisor expectations

Source: - Consensus Economics July 2019

The consensus forecasts for inflation in 2019 have not changed significantly from April, but they have been revised lower for 2020. Actual inflation has for the most part turned out lower than forecast despite the higher energy prices we saw earlier in the quarter. As I mentioned last quarter, it remains somewhat surprising that with very low levels of unemployment in the US and the UK and with wages rising at a pace ahead of inflation that overall inflation is not rising at a faster rate. There would appear to be two factors working to keep inflation lower than expected in the current environment; increased employment costs are being absorbed by company margins and profits and reduced investment and consumer demand may also be keeping prices down. If this is the case it will help Central Banks remain accommodative, which for the Fed means they can cut rates further without risking higher inflation. Once again the Trade negotiations could have an impact as the tariffs imposed are passed on to higher prices for businesses and consumers, which should be inflationary unless they reduce consumption and that could be dis-inflationary.

MJ HUDSON Allenbridge

For now, the global medium term trend in inflation seems to be down, or at worst flat lining around the main central bank target rate of 2% for the UK and the US.

Over the 3 months to July US headline inflation has fallen from 2% in April to an average of 1.7% whereas, ex food and energy US core inflation moved higher from 2.1% to 2.2%, driven by higher housing and personal goods and services costs.

In the UK headline inflation remains around 2.1% over the quarter, prices for discretionary domestic goods and services increased to most offsetting falling energy and transportation costs. Core inflation which excludes food, energy, alcohol and tobacco in the UK, increased to 1.9% p.a.

Inflation in the Euro Area peaked in April at 1.7% p.a. and is now only 1.1% in July. Core inflation, which like the UK excludes food, energy, alcohol and tobacco, has fallen back to 0.9% from 1.2%.

The Japanese inflation rate also peaked in April at 0.9% and due to falling energy and communications prices has fallen back to 0.7% and core inflation, which only excludes fresh food prices, also fell from 0.8% to 0.6%.

4. The outlook for the securities markets

In light of the near term developments on the outlook for global growth and the increased trade tensions between the US and China, I have made some changes to my asset allocation recommendation to reflect the heightened risk to the outlook for the securities markets. These changes reflect my more cautious outlook for the next year to eighteen months and can be seen in the right–hand column of table 9. Over the medium to long term (more than 5 years), I still stand by the recommendations expressed in my last report dated the 9th May.

I have decided to reduce my overweight to Growth assets from +2% to neutral. Within equities I still believe US equity is overvalued and emerging markets undervalued but I have reduced the relative allocation from 2% to 1%. I have also reduced the 1% overweight to Japan and Asia Pacific to neutral. The recent strength in the bond markets represents an extreme, all 10 year bond market yields are lower than cash and hence tactically I would prefer to be 2% underweight Protection assets and 2% overweight cash. I understand that these short term tactical changes are difficult for the Fund to implement, but I believe the worsening outlook for growth driven by the increased political uncertainty needed to be reflected in my recommendations. Indeed should the trade negotiations between the US and China become more protracted there may be a case for being underweight equity and overweight bonds. I believe the priority for the Fund remains increasing the allocation to Income assets, therefore I continue to recommend a neutral allocation.

Bond Markets

In table 6, below I have set out my expectations for 3 month LIBOR interest rates and benchmark 10 year government bond yields, over the next 6 and 12 months. They are not meant to be accurate point forecasts, more an indication of the possible direction of yields from August 2019.

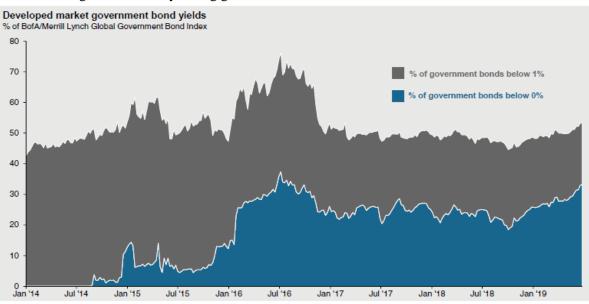

%	CURRENT	MARCH 2020	SEPTEMBER 2020
UNITED STATES			
3month LIBOR 10 year bond yield	2.18 1.74	1.75 1.75	1.75 2.00
UNITED KINGDOM			
3month LIBOR 10 year bond yield	0.77 0.48	0.75 1.0	0.75 1.25
JAPAN			
3month LIBOR 10 year bond yield	-0.10 -0.22	-0.10 0.10	-0.10 0.10
GERMANY			
3month EURIBOR 10 year bond yield	-0.42 -0.58	-0.25 0.35	-0.25 0.35

Table 6: - Interest rate and Bond yield forecasts

Source: - Bloomberg, Trading Economics; 9th August 2019

Since the last Pension and Investment Committee meeting in June, the global economy has slowed and second quarter growth has been reported as lower than expected. Inflation remains benign and below the monetary policy target rate of 2%. Government bond yields are lower than cash rates in most of the developed economies. As can be seen in chart 8 below over 30% of developed government bond yields are negative, as table 6 shows German 10 year bond yields are -0.58%.

Source: Bloomberg, BofA/Merrill Lynch, J.P. Morgan Asset Management. Index shown is the BofA/ML Global Government Bond index. Past performance is not a reliable indicator of current and future results. Guide to the Markets - UK. Data as of 30 June 2019.

The change in the markets are the result of the macro-economic and political factors mentioned above, the decision by the US Central Bank (Fed) to cut rates in July by 0.25%, the markets expectation of 2 further rate cuts in the next 12 months, the increasingly "dovish" comments from all central banks and the most recent escalation of the US, China trade negotiations. As a result I believe that the current level of yields represents an over-reaction and I expect yields to increase over the next few months, producing negative returns.

As I said last quarter, I find it difficult to believe that government bond yields can fall below their current level (except in the US) over the medium term, nor can I see credit spreads substantially narrower. I therefore expect government bond markets to potentially produce negative returns over the balance of the year as the current overvaluation is reversed. Easier monetary policy is supportive of high yield bond markets, so while spreads may not narrow by much, the higher the yield, the higher the return. I continue to believe that while there is scope for volatility generated by economic data and the Trump trade negotiations, by the end of the next 12 months I expect bonds yields will have drifted higher.

Bond Market (Protection Assets) Recommendations

Over the last few months the world's major central banks have returned to monetary accommodation, this has driven German and Japanese bond yields into negative territory and has pushed 10 year UK government bond yields to a new "all time low" of 0.48%. In my last report I thought government yields were already too low, I therefore consider the recent moves to be an over-reaction which will be unwound over the coming months. As suggested in table 6 above I expect global government bond yields to rise, I therefore propose remaining underweight government bonds.

The outlook for investment grade non-government bond markets is equally uncertain. Spreads have narrowed on stronger equity markets and the end of monetary tightening has provided a duration benefit. Should government bond yields rise, so will the yield on investment grade credit so they are also likely to deliver a negative return, equally if the economy slows, spreads could widen also resulting in negative returns. Investment grade credit is also vulnerable because of the high leverage, low interest cover particularly in the US and falling liquidity in all markets. The high yield bond market doesn't have the duration risk and ironically compared to history, leverage is lower and interest cover higher. As I mentioned last quarter for now, the higher the yield and the lower the duration the better the result will be provided one avoids the risk of default.

As usual in table 7 below I have updated the data and recalculated my estimates of the total return impact of rising yields for government and non-government bond indices based on their yield and interest rate sensitivity (Duration) over 3 and 12 months. The estimates do not take into consideration any widening of spread over the holding period.

INDEX	YIELD TO MATURITY %	DURATION	YIELD INCREASE %	% TOTAL HOLDING	RETURN, G PERIOD
				3 MONTH	12 MONTH
All Stock Gilts	1.10	11.56	0.5	-5.5	-4.7
UK Corporate Bonds	2.09	8.55	0.5	-3.8	-2.2
Global High Yield	5.66	3.47	0.5	-0.3	+3.9

Table 7: - Total returns from representative bond indices

Source: - BofA Merrill Lynch Indices 9th August 2019

Despite my short term reservations about the level of yield expressed above I still believe corporate bonds should be held at neutral in the Fund, mainly because I believe the bigger risk is in longer duration government bonds especially index linked gilts. The Fund does not need to pay a negative yield for inflation protection. The Fund should be seeking to protect itself against inflation by buying Income/Real assets with cash flows linked to inflation where yields are much higher than Index linked gilts.

MJ HUDSON Allenbridge

Equity Markets

Table 8 below, shows the dividend yield, earnings growth and price / earnings ratio forecasts, for 2019 and 2020 provided by Citi Research.

COUNTRY	DIVIDEND YIELD	EARNINGS GROWTH		PRICE/EARNINGS RATIO		
FORECAST PERIOD	2019	2019	2020	2019	2020	
United Kingdom	4.8	3.4	8.4	12.9	11.9	
United States	2.0	4.1	11.6	17.9	16.0	
Europe ex UK	3.6	7.8	9.4	14.4	13.2	
Japan	2.5	1.4	5.6	12.9	12.2	

Table 8: - Dividend yield, Earnings growth and Price/Earnings Ratios

Source: - Citi Research, Global Equity Strategist, May 2019

Earnings growth estimates for 2019 and 2020 have not changed significantly over the quarter with 2020 remaining optimistic. While most companies that have already reported beat the advance second quarter estimates as they did in the first quarter, this is the second quarter where US earnings in particular have declined over the previous year. Further declines are expected in the third quarter and fourth quarter earnings growth is expected to be flat, all of which makes these 2019 forecasts look a bit optimistic as well.

The last few months have seen a slowdown in global growth and a marked increase in political risk. The brinkmanship over the US/ China trade negotiations and the extended period of time now needed to come to an agreement has caused investment and global trade to fall. The outlook for industrial production is weakening. Add to this the impact of lower earnings, higher wages and higher corporate debt and I find it difficult to see equity markets, especially the US, delivering the high returns of recent years and I also expect to see periods of market volatility return. The rapid response of the Fed and other central banks could be enough to prevent a recession but the risks have increased.

Equity Market (Growth Assets), Recommendations

I have reduced my suggested allocation to growth assets from 2% overweight to neutral.

Looking regionally, because of the continued strong performance of the US on an absolute and relative basis and the potentially poor future prospects, I believe profits should be taken, but I have reduced my underweight from 2% to 1% to reflect the fact that the US still has stronger near term growth prospects relative to rest of the developed world. The weaker outlook for global trade and industrial production caused by the poor state of the US, China trade negotiations will potentially have a bigger impact on Europe, Japan and Asia pacific. As a result I believe Europe should be held

at neutral and Japan and Asia Pacific reduced from 1% overweight to neutral. I continue to have long term confidence in the growth prospects for the emerging economies. Now that the Fed is cutting interest rates and a further 50bps is priced into market expectations the US dollar is likely to weaken which should have a positive impact on emerging markets. Despite the increased uncertainty emerging market equity remains cheap on relative valuation basis hence I recommend building to a reduced overweight exposure of +1% instead of +2% funded from the USA. Progress is being made to bring the UK allocation down to neutral versus the new strategic weight but this will take time.

As the asset allocation to Private Equity remains underweight relative to benchmark, I continue to recommend that investments are sought to get the allocation to neutral as opportunities arise. The new allocation to Global Sustainable Equity has yet to be finalised, I suggest a 3% neutral allocation should be seen as an initial investment.

Income Assets

The allocation to Income Assets has been increased from 18% to 23% mainly funded by a reduction in Growth Assets. I believe this provides the Fund with a more diverse opportunity set going forward. Both Infrastructure and Multi-Asset Credit have had their weight increased significantly and because of the nature of the investment process it will take time to fill up these allocations therefore I have taken the pragmatic view to leave the suggested allocation at neutral. I know the In-house team are working hard on finding suitable investment vehicles and have shown progress over the last few months.

The Property market continues to provide diversified returns for the Fund and the direct property manager has outperformed. I continue to recommend that a neutral overall weight to property be maintained and express a preference for being 1% overweight direct, against being 1% underweight indirect property.

The cash balance in the new strategic benchmark is set at 2%, because of the extremely low level of Government bond yields cash actually has a higher yield, equally as the risks to growth assets have increased I propose that the that cash is held temporarily at +2% overweight. Should bond yields rise from their current extremely low level then this cash could be deployed to the bond market if the prospects for the equity markets do not improve.

The asset allocation set out in table 9 below, shows the new Strategic benchmark allocations for the Derbyshire Pension Fund and my recommended relative weights as of 9th May 2019 and the 9th of August. My suggested asset allocation weights are relative to the new classification of assets and strategic benchmark ranges. They represent an ideal objective for the Fund based on my medium to long term expectations for economic growth and market performance, but they do not take into consideration the difficulty in reallocating between asset classes and the time needed by the In House Team and their investment managers to find correctly priced assets for inclusion in the Fund.

MJ HUDSON Allenbridge
